GRAPHICAL ABSTRACT

Amylase signal across physicochemical conditions

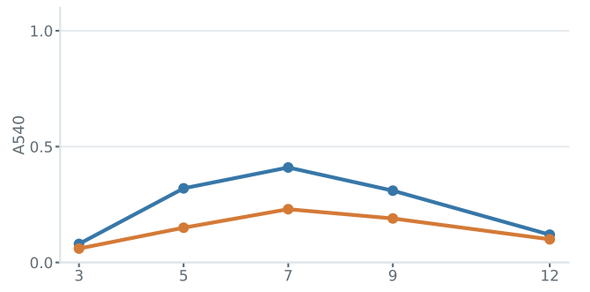
DNS endpoint A540 · Commercial fungal and salivary amylase

MALTOSE CALIBRATION REFIT
A540 = 0.81833C − 0.01578
R^2 = 0.99070

Commercial fungal amylase Salivary amylase

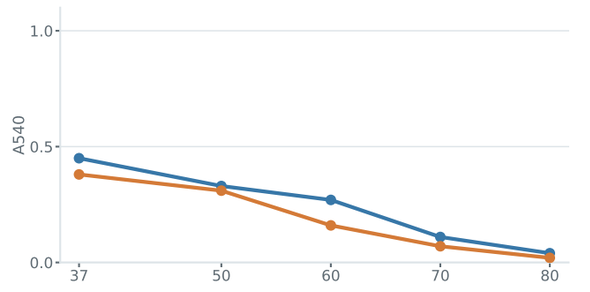
Shared scale: 0–1.1 A540

pH



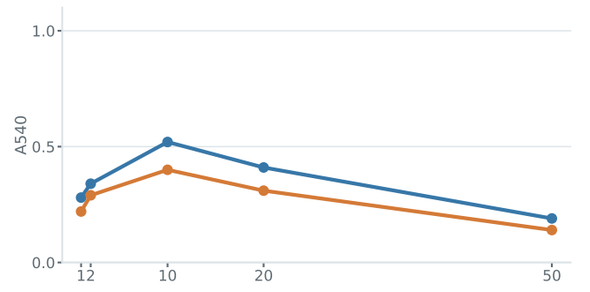
Highest at 7: fungal 0.41; salivary 0.23

Temperature



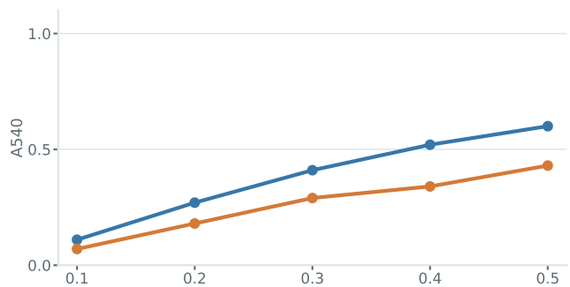
Highest at 37: fungal 0.45; salivary 0.38

$CaCl_2$



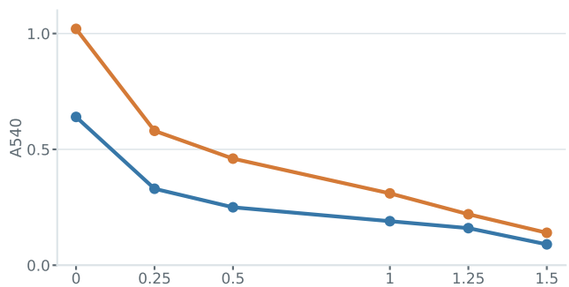
Highest at 10: fungal 0.52; salivary 0.40

Starch



Rises to 0.60 / 0.43 at 0.5%; no plateau

Ethanol



Falls to 0.09 / 0.14 by 1.5%

One source-reported reading per condition; no replicates or error bars. Lines are visual guides, not fitted models.

$CaCl_2$ and ethanol final concentrations are unclear. DNS results are endpoint absorbance, not normalized enzyme activity.

Source report: calibration pp. 8–9; assay tests pp. 13–32
